

Time to take control...

timeware® Workforce Management Software

The timeware® software comprises of a suite of modules that enable a company to record and report key business information.

At the heart of timeware® is the Attendance module containing one of the most customisable time and attendance 'engines' available today. This module supports many work pattern methodologies including standard, flexitime, continental shifts and annualised hours. It can also process the hours worked by workers using the ESS GO mobile app. Multiple customisations points enable the Attendance module to provide a unique time management solution for your business which ultimately ensures the accurate calculation of the basic and overtime hours worked by your employees.

Authorised and unauthorised leave can be tracked through the Absence Management module which can highlight trends and anomalies whilst ensuring that everyone takes their correct holiday entitlement.

The Personnel module can be used as an enhanced database tool, storing information relating to each member of your team. Integrations enable this module to be populated by your existing HR system if required.

For businesses required to record the time taken to complete manufacturing processes, the Job Costing module provides an effective way of recording the start and stop times of both jobs and operations.

If a business has different pay rates when people work in different areas of the business, the Cost Centre Analysis module provides a number of alternative solutions.

When connected to approved devices, the Access Control module can be used to provide a physical access control solution, allowing managers to determine who can access certain areas of a building based on predefined security levels.

The Fire Alarm Monitor/Assembly Point module can be connected to your fire alarm system and muster point devices to provide a fast and accurate rollcall in the event of a fire.

The Dashboard and Report module enables users to quickly view data gathered by each of the modules with options to view information in Excel.

timeware® UK Ltd is an approved Suprema Integration Partner and can provide solutions including proximity, fingerprint and face recognition solutions.

timeware® has been developed over 30 years and incorporates an impressive range of functions providing managers with real-time information that may be viewed on PCs, Tablets, Mobiles and Wall-mounted displays.

Customisation...

timeware's secondary USP is its extensive customisation potential. Over 95% of businesses using timeware® software have implemented at least one unique customisation project. This means that the majority of timeware® customers benefit from a unique business tool that provides a maximum return on their product investment.

Attendance device...

The most comprehensive employee attendance module requires the best attendance device so we've integrated our software with products from two world-class manufacturers, Suprema Inc. and Paxton.

It's easy to use - the employee simply presents their Paxton access fob at the start and end of their shift.

The attendance device is smart enough to be installed in an office yet tough enough to work outside in the rain! It's IP67 rated, incorporates a screen to display the time and date, but most importantly, it highlights the employee's name each time they make a booking.

Looking to the future and going 'fob-free'? The attendance device is fingerprint ready, incorporating Suprema's world class biometric technology which can be enabled by the customer through the software.

Integration...

timeware's primary USP is its ability to integrate with other applications, for example a Payroll, HR or Security system. timeware® or the third party software becomes the 'primary' system passing data to the 'secondary'. A well planned integration enables a business to improve workflow and increase efficiency.

HR Integration

Access Control Integration

Visitor Integration

Payroll Integration

ESS GO...

There's a mobile app designed to work with timeware® software can streamline your business, empower your workforce and eliminate traditional, time consuming tasks.

The app is called ESS GO and it enables users to request leave, check work rotas and view timesheets from their Android or Apple smartphone.
