

Script Name:

Award Amount Based on Week Formula (Rounded)

Script Type:

Absence Entitlement

Overview

This script is designed to pro rata an employee's entitlement based on Weeks and is to be placed in the script option of the Absence Entitlement Policy in 0–1-year bracket only. This script will round to the nearest value set in the script depending on whether it is rounded up or down via the settings.

Dependencies

No dependencies.

Operation Example

- No operation required. The system will automatically pro rata the entitlements for employees.

Configuration

- Assigned within the "Absence Entitlement Policy" in the "script" option on the "Less than one year" row.

Explanation of notable fields

Private Const DAY_ROUNDING As Currency = 0.5	The value you wish to round by in Days. By default, this is 0.5 so will round to the nearest 0.5. Note this option is only used if entitlements are in days
Private Const MINUTE_ROUNDING As Long = 15	The value you wish to round by in Minutes. By default this is 15 mins. Note this option of only used if entitlements are in HH:MM.
Private Const ROUND_TYPE As Long = eRoundType.Up	Determine whether to round up or down. Change the part that says Up in our example to down if you want to round down.
